The Shipping Solutions division of Eurolog SRL specializes in the design and manufacturing of products for cargo conditioning, offering solutions that improve the international transportation of merchandise.

The EuroLiner® product line was developed to offer you additional protection for merchandise that, due to its nature, requires special handling.

It can be adapted to any module and mode of transport:

- 20', 40' and 40' HC Dry Containers
- Trucks
- Pallets
- Packages with special sizes

Eurolog offers different types of EuroLiner®, manufactured with different materials according to the merchandise to be transported.

Types of Materials

- Materials with which Euroliner® can be manufactured
- Polyethylene with a high crystal density
- Reflex aluminized polyethylene
- Coated polypropylene raffia
- Polypropylene raffia laminated with aluminum

All these materials are manufactured under the ISO 9002 norms and are completely recyclable and disposable in any country in the world.

Products that already use EuroLiner - Bulk

Chemical products, polyethylene pellets, grains, peanuts, flour, granulates, powders.

Products that already use EuroLiner - Fullbag and EuroLiner - Heavy Duty

Automotive parts, electric appliances, furniture, chemical products, gelatin, powdered milk, personal objects in international movings, antiques, works of art.

Advantages of using EuroLiner®

- ✓ Prevents the merchandise from making direct contact with the means of transport.
- ✓ Prevents spills and odor emission inside and outside the container.
- ✓ Quick installation.
- ✓ Protects the cargo during transportation.
- ✓ Improves the presentation of your product and your company.
- ✓ Avoids extra costs of cleaning the containers.
